

Spring Core_Maven outputs:

Exercise 1: Configuring a Basic Spring Application

Scenario:

Your company is developing a web application for managing a library. You need to use the Spring Framework to handle the backend operations.

Exercise 2: Implementing Dependency Injection

Scenario:

In the library management application, you need to manage the dependencies between the `BookService` and `BookRepository` classes using Spring's IoC and DI.

Exercise 4: Creating and Configuring a Maven Project

Scenario:

You need to set up a new Maven project for the library management application and add Spring dependencies.
